

The text that never gets sent

A 30-second habit that makes your showing check-in automatic

Most agents already have a safety habit. Before a showing, you text someone the address. When you're done, you text again to say you're out. It's a good habit, and it works right up until the day the second text is the one that never gets sent.

That's the weak spot. The system depends on someone else *remembering to worry*. If your office manager is in a closing and your spouse is on a job site, a missing "I'm out" text can go unnoticed for hours.

Flip it around

A check-in timer turns the habit inside out. Instead of you having to raise the alarm, the alarm raises itself unless you say you're fine:

1. **On the way in**, start a timer for the length of the showing, such as 30 or 45 minutes.
2. **On the way out**, tap once to check in. Nothing is sent and nobody is bothered.
3. **If you don't check in**, the people you chose get a text and an email with your last known location.

Why "even if the phone is off" matters

A panic button only works if you can reach it. A timer covers the opposite case: when you *can't* act. The better apps also keep the countdown on a server, so the alert still goes out if the phone is switched off, dead, or taken.

Screening plus a timer

If your association or MLS offers a client-screening tool, use it. Screening helps with *who* you're meeting. A check-in timer covers what screening can't: what happens after you walk in. They work well together, along with the basics: meet new clients at the office first, and tell someone where you're going.

Frank Nowicki is a software developer in Roseville who built SafePulse, a check-in app for people who work alone.

One option: SafePulse

Built in Roseville for agents who show property alone. Contacts don't need the app.

What it is not

- ✗ **Not 911.** It notifies your contacts, not emergency services.
- ✗ **Not tracking.** Location is shared only if you miss a check-in. No broker map of your day.
- ✗ **Not a guarantee.** It needs cell or internet service to reach your contacts.

iPhone: free download, \$2.99/month

Android: \$4.99 once
